

SUSTAINABLE RESILIENT EU FARMING SYSTEMS

## Towards a resilienceenabling environment: principles and roadmaps

Partners from 10 other case-studies

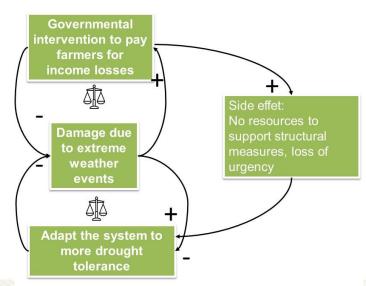

This project has received funds from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No 727520

## 1. The role of actors in enabling (or disabling) resilience

- Actors' decisions regarding how to use their resources influence resilience of the farming system
- Actors' decision are determined as much by informal institutions (norms, collaboration culture, innovativeness, subjective beliefs, ...) as by formal institutions (policies)
- System analysis reveals several stylized pattern of systemic behavior that leads to failures, such as 'shifting the burden' archetype

## 2. Principles for enabling resilience

Conduct more systemic in-depth analysis of the drivers of challenges and vulnerabilities

Find a balance in putting resources in immediate versus future challenges

Assist Farming System to detect, assess and address long-term trends

Foster a diversity of responses, rather than focusing too much on a limited set of actions strengthening resilience

Shift resources towards building anticipatory capacity and responsive capacity when shocks are reoccurring

Provide temporary resources to cope with the adverse consequences of a shock, but only to buy time.

## 3. Implementing SUREFARM's principles: ROADMAPS

- Policy dialogue processes should be used
  - All actors need to be involved
  - Roadmaps for implementing principles can be region and farming system specific
  - Address mix of formal and informal institutions, not specific instruments in isolation
  - Withstand the tendency to add new instruments but rethink the mix
  - The issue needs to be ripe and actors need to be convinced that (and why) enabling resilience does not equal to protecting status quo
  - Role of analyst will meet its limits as normative considerations regarding responsibilities and

expectations will become more prominent
